I. EXECUTIVE SUMMARY

Business Overview: Since 1978, the Walmart franchise has opened 5,000 pharmacies nationwide aiming to provide customers with low costs and quality care. The company's mission is to offer customers inexpensive costs, great service, and convenient locations. The primary target market for the Walmart Pharmacy in Vancouver, WA is people between the ages of 35-64 who are managing chronic illnesses or have regular prescriptions. By providing low-cost prescriptions, friendly service, and a multitude of locations, Walmart Pharmacy upholds its slogan of **"Save Money. Live Better."**

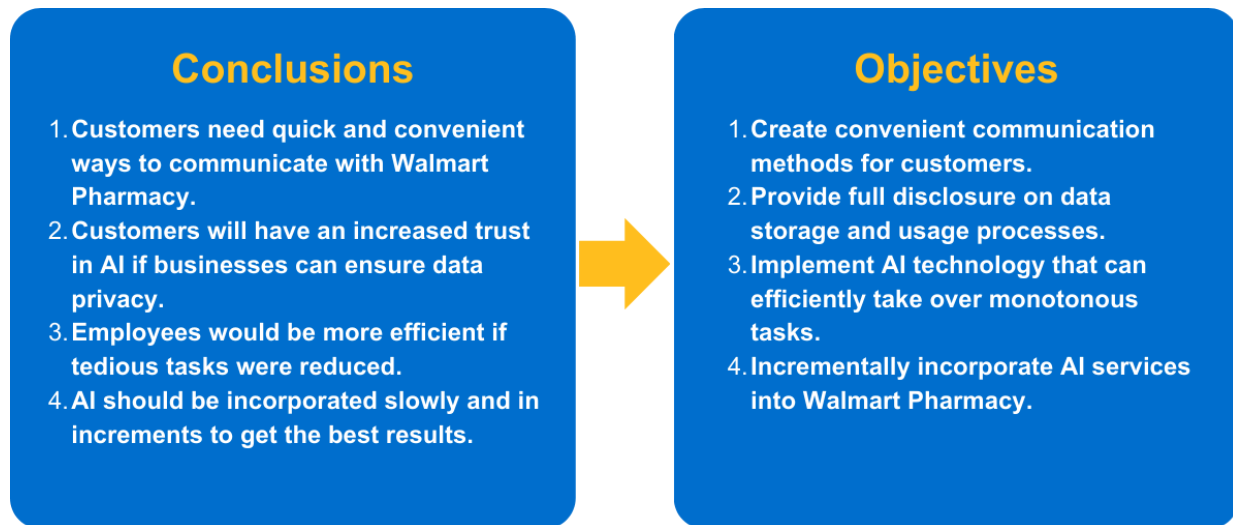

Problem: After interviewing Tahir Ahmed, the Pharmacy Manager at Walmart, we learned that the pharmacy faces numerous time-consuming tasks and struggles with inefficient communication methods with patients. Additionally, customers' reviews highlight long prescription wait times causing dissatisfaction. He also mentioned that there is currently very limited, inefficient AI being used in the pharmacy.

Research Methods: To understand what needs improvement at Walmart Pharmacy, we used various primary and secondary research methods to find the solutions to the problems mentioned.

Findings of Research Study: We identified common trends in our research to determine key findings. Using these findings, we derived conclusions and objectives that can aid in developing a campaign for AI implementation at Walmart Pharmacy.

Research Conclusions/Objectives: Using the research findings, we derived multiple conclusions and objectives. These conclusions allowed us to gain an understanding of the needs at Walmart Pharmacy while the objectives allowed us to effectively strategize our plan.

Proposed Strategic Plan:

Communication: The *Communication* aspect of the plan will make it easier for customers to access pharmacy services online and communicate with Walmart Pharmacy 24/7. We will launch a virtual care program called Walmart TeleCare, which will include services such as predictive analytics, online consultations, an AI chatbot, and a system for creating treatment plans.

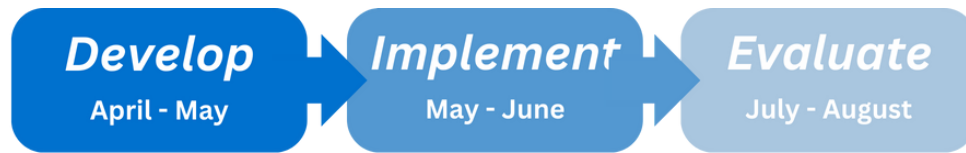

Authentic: This area of the campaign will focus on reassuring customers that their medical data will be handled ethically to provide patients with an accurate and personalized experience. Customers will have access to Walmart Pharmacy's privacy policy, ensuring their data is protected. They will also be informed about the Health Insurance Portability and Accountability Act (HIPAA) that prevents the pharmacy from indulging in unethical practices.

Resourceful: This part of the CARE campaign aims to help Walmart Pharmacy employees make better use of their time by assigning monotonous tasks to AI assistants. To improve pill-counting efficiency, an AI-based automated dispensing machine will be introduced. Additionally, AI will be used to create staffing schedules by predicting peak demand times based on previous data trends and employee availability.

Establish: The final part of the campaign, *Establish*, focuses on determining an effective integration rate to maximize AI benefits. This will include a paid training program to help employees understand how to use each AI component introduced in the pharmacy. By

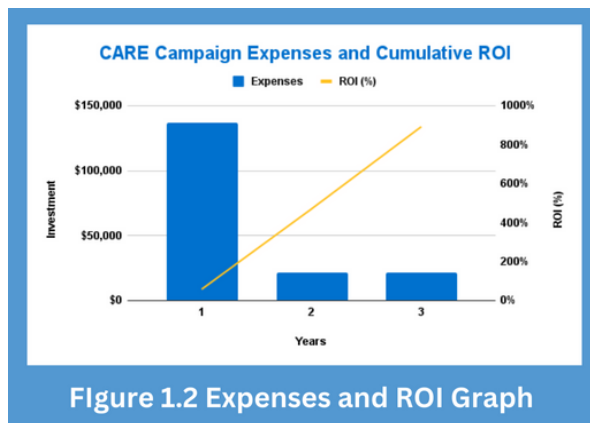

integrating new AI technologies gradually instead of all at once, we can minimize errors and reduce the need for reevaluation.

Timeline:

Proposed Budget and ROI:

The initial investment for the CARE campaign will be \$136,780, with an annual recurring cost of \$21,780. We anticipate that the new AI implementations will enable the pharmacy to vaccinate 400 more people and fill 20% more prescriptions each year. This will result in an additional annual revenue of \$216,000 and an ROI of 58%.

	Cost
C	\$11,000
A	\$180
R	\$115,360
E	\$10,240
Total	\$136,780

Key Metrics:

To measure the success of the CARE campaign, qualitative and quantitative measurements will be used.

	Purpose	Metrics	Goal
C	- Provide customers with virtual healthcare	- Number of Customers using Walmart TeleCare - Phone calls made to Walmart Pharmacy	- 70% of Walmart Pharmacy patients are using Walmart TeleCare - 50% decrease in phone calls
A	- Increase trust between customers and Walmart Pharmacy	- Amount of customers accepting the privacy policy and opting-in to AI benefits	- 90% of patients using Walmart TeleCare will opt-in for AI benefits
R	- Increase efficiency - Reduce tedious tasks to better utilize employees	- Amount of clinical services provided by pharmacists - Amount of filled prescriptions	- 20% increase in clinical service availability - 20% increase in prescription availability - 20% wait time reduction
E	- Ensure smooth transition of AI tools	- Monitor problems and changes needed	- Reduce negative feedback by 50%

II. INTRODUCTION

A. DESCRIPTION OF THE BUSINESS OR ORGANIZATION

Walmart opened its first pharmacy in 1978, with a focus on providing low costs and great care to communities. Over the last four decades, it has continued to expand its pharmacy business, growing to around 5,000 Walmart pharmacies nationwide. Walmart Pharmacy's mission is to improve the cost and convenience of healthcare by offering inexpensive prescriptions, friendly service, and convenient locations. The company's slogan is, "**Save money. Live better.**" and they uphold this by providing affordable medications, access to immunizations, as well as counseling services.

This study will solely focus on the Walmart Pharmacy in Vancouver, Washington which has been open since 1998. It is a busy location and receives many customers daily. Some products and services it provides include prescription medications, immunizations, Testing and Treatment (COVID-19, Strep Throat, Flu), hormonal contraceptive prescribing, and counseling. The pharmacy manager, Tahir Ahmed, has said that there is "**always at least one pharmacist on duty and four to five pharmacy techs or assistants.**" This ensures that customers are being served efficiently.

Figure 2.1 Walmart Pharmacy

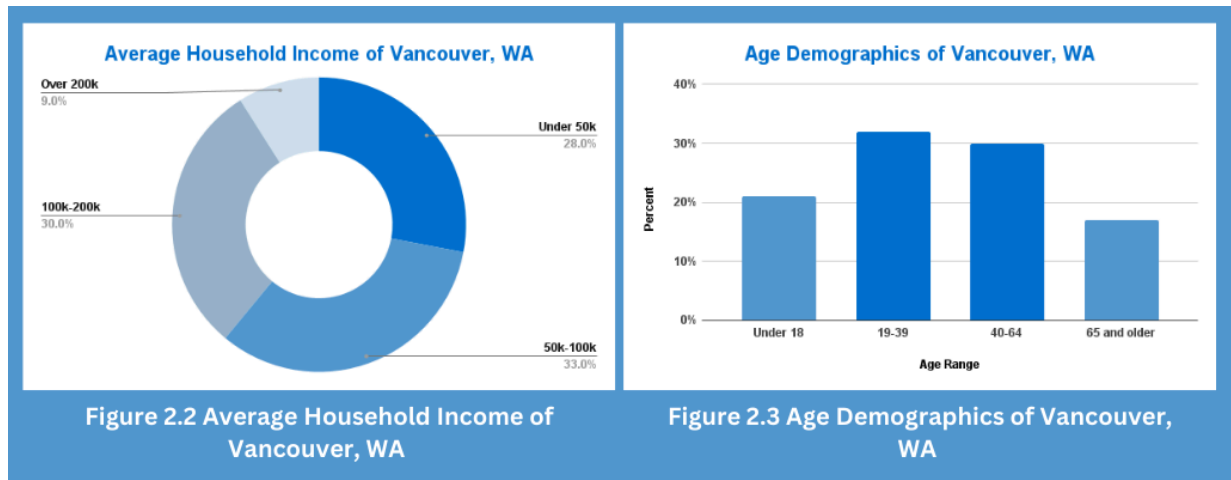

Currently, Walmart Pharmacy's biggest competitor is CVS Pharmacy. Although CVS is using telemedicine which is a way for pharmacists to provide care for patients online, Walmart is very accessible and 90% of Americans live within a 10-mile radius of a Walmart. It also sells the cheapest priced insulin in the pharmaceutical market which is \$24-\$25 per 10mL giving them a cost advantage.

B. DESCRIPTION OF THE TARGET MARKET (DEMOGRAPHICS AND PSYCHOGRAPHICS)

To better understand the needs of their customers, Walmart Pharmacy should assess their primary and secondary target markets. This is why we have included the demographics and psychographics of their patients and customers.

Primary Target Market: The primary target market is customers between the ages of 35-64 that are managing chronic illnesses or have regular prescriptions. These patients usually come from lower-middle income households because of Walmart's affordability and convenient locations.

Demographic: The demographics of the primary target market reflect the demographics of this age group in Vancouver, Washington. Of the total residents, 37.5% of them are from the ages of 35-64 as shown in Figure 2.3. Although there is a wide range of income levels, the median household income in Vancouver is \$76,800 (Figure 2.2).

Psychographic: Walmart Pharmacy's customers consist of people who choose to prioritize their health and wellness and those who are facing chronic illnesses. These people are also cost-conscious by choosing to purchase from a very affordable pharmacy. They value their time by visiting a convenient pharmacy located in a retail store. While waiting for medications, they can buy groceries and use other services Walmart offers. Many of these customers also have children or other family members for whom they may be picking up prescriptions.

Secondary Target Market: Walmart Pharmacy's secondary target market consists of senior citizens (65 and up) who are on multiple regular medications and need counseling about their health.

Demographic: The customers in the secondary target market come from the senior citizens age group in Vancouver which comprise about 16% of the total population. They are usually living on fixed incomes that come from Social Security or retirement savings. Because of this, they are likely to be more inclined to invest in affordable healthcare.

Psychographic: Senior patients tend to have chronic health issues which is what makes them the secondary target market for this pharmacy. These patients value affordability and convenience. They also prefer in-person meetings with pharmacists because it is easier for them to schedule immunization appointments and pick up prescriptions. Usually, seniors will require regular medications to manage increasing health issues with age. Diabetes is a very

common illness in seniors and since Insulin is sold at a low cost at Walmart, this age group will likely favor Walmart Pharmacy.

C. OVERVIEW OF THE BUSINESS OR ORGANIZATION'S CURRENT ARTIFICIAL INTELLIGENCE STRATEGIES AND USAGE

Currently at Walmart Pharmacy, there is some basic AI that is being used and could be improved. AI monitors prescriptions to flag any drug interactions that suggest that there would be a problem in taking these drugs concurrently. Although this system seems useful, the pharmacy manager has said that AI technology currently being used for this task is outdated and falsely detects problems at least 40% of the time. After conducting the interview with Tahir Ahmed, we were able to recognize three key challenges faced by Walmart Pharmacy.

1. Wait Times

Customers have expressed that wait times at Walmart Pharmacy are too long. Some have said that waiting to pick up prescriptions can take over an hour causing dissatisfaction.

2. Time-Consuming Tasks

Many tasks at Walmart Pharmacy require much time and are not mentally stimulating. Such tasks could easily be taken over by AI to allow pharmacy employees to focus more on clinical services.

3. Communication

Customers need convenient means of communication with Walmart Pharmacy. Currently, patients can only call and email the pharmacy during its office hours. It would be beneficial if customers had the option to connect with pharmaceutical services virtually outside of business hours.

III. RESEARCH METHODS USED IN THE STUDY

A. DESCRIPTION AND RATIONALE OF RESEARCH METHODOLOGIES SELECTED TO CONDUCT THE RESEARCH STUDY

Research Problem: Walmart pharmacy strives to increase efficiency, reduce the amount of repetitive tasks, and give employees more time to focus on patient care. A variety of research methods were used to determine how artificial intelligence can be used to meet these objectives. The goal of this section is to develop a structured plan that effectively integrates AI into the pharmacy.

There is a constant expectation on healthcare facilities to be efficient in patient care, while maintaining their patient's medical privacy and staying within ethical boundaries. We conducted research using the following methods to better understand the limits of AI in healthcare.

Primary Research:

Interview with Manager: To understand AI usage in background tasks at the pharmacy, an interview was conducted with the pharmacy manager, Tahir Ahmed. This gave us an overview of how artificial intelligence is used in the pharmacy and in what ways it could be further integrated into pharmaceutical services.

Competitor Research: Competitor Research was conducted to understand how competitors utilize AI in their healthcare processes. This research allowed us to determine what advantages or disadvantages the competitors may have in AI technology compared to Walmart Pharmacy.

Business Panel: To better understand how different businesses use AI, a business panel involving 9 individuals from Camas and Vancouver was organized. Hearing from multiple people with different perspectives provided us with a broader view on how artificial intelligence is currently being used. This gave us a lot of useful information in developing the plan for incorporating AI at Walmart Pharmacy.

Survey: A survey consisting of multiple choice, open-ended, and scaled response questions was sent out to a group of people in the Camas/Vancouver area. The purpose of this survey was to understand consumer opinions on customer facing AI that is currently being used for a variety of businesses.

Secondary Research:

Article Research: Article research was done to clarify how AI services are currently being used in healthcare. This research provided insight on AI usage in managing patient care and tasks involving medical data. The goal of this research was to identify limits of AI integration in the healthcare industry.

Online Reviews: Online reviews of this pharmacy gave us a customer perspective on how services are delivered by employees. This information was useful in illuminating how AI could be used to enhance customer engagement by determining areas of improvement.

B. PROCESS USED TO CONDUCT THE SELECTED RESEARCH METHODS

It is important to formulate an organized plan when conducting research. The following table outlines the detailed process for each research method we employed.

Research Method	Process
Interview with Manager September 18, 2024 September 24, 2024	• Contacted manager to schedule interview • Formulated open ended questions that provided information on the pharmacy and current AI usage • Held in-person interview while taking notes and asking follow-up questions
Competitor Research September 27, 2024 October 2, 2024	• Used information provided by manager to decide which competitor to focus on • Researched competitor's website and information pages • Made calls to competitor business verifying information
Business Panel October 15, 2024	• Prepared open-ended introductory questions as well as follow-up questions • Invited Camas community members to participate in panel • Conducted business panel with 9 members and 2 student moderators • Organized key information and responses into different categories to analyze
Survey October 8-13, 2024	• Created survey with 10 questions (open-ended, multiple choice, scaled response, and dichotomous) concerning how customers interact with businesses that incorporate AI tools • Sent out survey to community members and received 226 responses making it a reliable sample size • Analyzed survey results and identified data trends
Article Research September 16, 2024	• Found reputable articles containing information on current strategies used to incorporate AI into healthcare • Reviewed articles and noted information relevant to pharmaceutical services
Online Reviews October 4, 2024 October 17, 2024	• Found a variety of reviews from platforms such as Google and Medallia • Sorted reviews into positive and negative categories based on customer experience • Identified key problems and challenges, as well as areas of customer satisfaction

Timeline of Research Methods:

IV. FINDINGS AND CONCLUSIONS OF THE STUDY

A. FINDINGS OF THE RESEARCH STUDY

From the information gained through primary and secondary research, we were able to recognize recurring themes, findings, and conclusions regarding artificial intelligence implementation.

Interview with Manager:

From the interview with Tahir Ahmed, we were able to identify current AI services being used at Walmart Pharmacy as well as challenges that could potentially be solved by AI implementation. According to Ahmed, there are currently some basic implementations of AI being used in the pharmacy. If a patient is taking multiple prescription drugs, the system automatically flags for possible drug interactions, which are then verified by the pharmacist. In addition, specific vaccinations are recommended based on a patient's age group or health conditions. Regarding the increase of AI usage, Ahmed believes that **“customers will likely be worried about privacy and safety.”** However, he feels that AI could be beneficial by taking over **mindless tasks** as **“counting and verifying pills take up too much time.”**

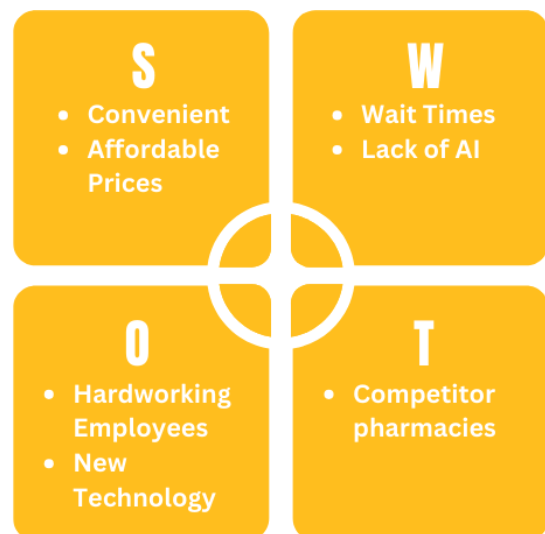

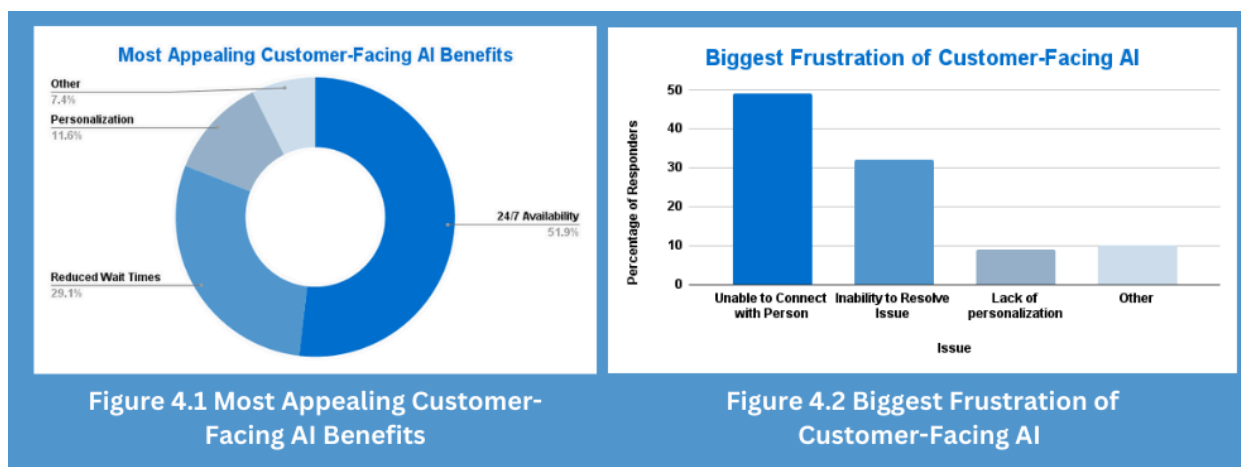

Figure 4.4 Strengths, Weaknesses, Opportunities, Threats (SWOT) Analysis

Competitor Research:

Competitor research was done to recognize artificial intelligence methods used by competitor businesses. This allowed us to address any advantages competitors may have over Walmart Pharmacy. For example, we learned that **CVS Pharmacy has a service called, "MinuteClinic Virtual Care."** It includes a popular service known as "telemedicine" which is a type of telehealth mainly used for pharmaceutical practices. Telemedicine provides customers with online diagnosis, treatment plans, and 24/7 consultations. AI plays an important role in telemedicine services due to its predictive analytics and chatbots.

Community Survey:

The survey that was sent out to community members of the Camas/Vancouver area provided us with a lot of useful information. Our results showed that **52% of participants find 24/7 availability to be the most appealing factor of customer-facing AI (Figure 4.1).** We also found that **49% of respondents expressed the frustration of being unable to connect to a real person** while another **32% of participants said they are unable to have their issue resolved with AI (Figure 4.2).**

Business Panel:

Participants of the business panel were able to provide us with much valuable information. They stressed the importance of having AI incorporation and one participant even said that **businesses "are not going to be around much longer if they don't implement AI."** A common belief among these employees was that **successful businesses must be up to date with technological advancements** to avoid falling behind. Another topic mentioned during the

panel was customer privacy concerns. It was recognized that “**transparency is a big deal but explainability is a big issue.**” Therefore, businesses are accountable for giving customers a reason for how and why AI came to a certain decision. Additionally, participants believed that **AI will be integrated best in increments.** They expressed that this method will allow employees to easily adapt to new AI tools and will make the change easier for customers.

Article Research:

After analyzing multiple articles from sources such as *Forbes* and *The Australian*, we were able to recognize how AI is currently being used in healthcare facilities. Artificial intelligence has proven to be particularly useful in virtual patient care. Depending on the healthcare facility, **patients can receive wearable devices that track and monitor their vitals as well as remind patients to take medications.** AI is also valuable due to its predictive power. It can **analyze a patient’s medical data and use it to develop predictions that may not be apparent to healthcare professionals.** In addition, it can **recommend effective healthcare plans for patients.**

Online Reviews:

After looking through online reviews on Google as well as an internal feedback system, Medallia, we were able to determine areas that could be improved at the pharmacy. Most customers had positive experiences at Walmart Pharmacy. The reviews mentioned that the **staff was very friendly, attentive, and quick to resolve problems with customers.** However, a recurring problem faced by customers was that **wait times were too long** and could take over an hour. Some also mentioned **problems with contacting insurances or doctor’s offices.**

B. CONCLUSIONS BASED ON THE FINDINGS

Using the previous findings, we were able to generate multiple conclusions based on recurring themes and issues. These conclusions can be used to better understand where AI implementation should be made at Walmart Pharmacy.

1

Conclusion #1: Customers need quick and convenient ways to communicate with Walmart Pharmacy

Having the ability to contact a business at all times is a preference for many. Survey results have shown that 52% of participants find 24/7 availability to be the most important feature of customer-facing AI. Furthermore, after analyzing the competitor’s websites, we were able to infer that CVS’s usage of telemedicine is very convenient for customers. Telemedicine allows customers to communicate with AI bots and connect to healthcare professionals at all times. This **virtual communication system would be very beneficial.**

2

Conclusion #2: Customers will have an increased trust in AI if businesses can ensure data privacy

Article research revealed that AI can be used to analyze patient data and come up with predictions or recommendations. However, the survey results have shown that customers are concerned about privacy implications and will want to know how their data will be safeguarded while being analyzed by AI. This is why **transparency and explainability are significant when using artificial intelligence services**. To ensure trust, Walmart Pharmacy should provide customers with an explanation of how AI makes decisions using their data. Additionally, they should offer full disclosure about data protection.

3

Conclusion #3: Employees would be more efficient if tedious tasks were reduced

Through the manager interview, we realized that employees often have much time taken up by mindless tasks leading to a lack of efficiency. To add on, a participant from the business panel talked about how **employees should be utilized for tasks involving their brains**. She said that AI would be very useful in taking over monotonous tasks. Therefore, through the interview and article research, we were able to gain insight on tasks that could be taken over by AI. This includes managing patient appointments, scheduling employees, counting and verifying pills, and formulating messages on behalf of the pharmacy.

4

Conclusion #4: AI should be incorporated slowly and in increments to get the best results

To effectively utilize AI, businesses need to have a full understanding of what they are working with. During the business panel, when the process of AI integration was discussed, the speakers suggested that it should be implemented incrementally to maximize benefits. This means that each aspect of new AI services should be incorporated gradually and effectively over time. This would **give managers more time to train employees on using new AI tools as well as allowing customers to adapt to new changes**. Going through online reviews, patients already have trouble adjusting to changes throughout the pharmacy. For this reason, it would be beneficial to assimilate artificial intelligence services periodically instead of all at once.

V. PROPOSED STRATEGIC PLAN

A. OBJECTIVES AND RATIONALE OF THE PROPOSED STRATEGIC PLAN

Based on our conclusions, we identified four objectives that will increase the usage of AI at Walmart Pharmacy. These objectives will give us a baseline for our business plan.

Objective #1: Create convenient communication methods for customers.

It has become apparent that customers need 24/7 access to Walmart Pharmacy. For this reason, virtual healthcare, such as telemedicine, should be included in the services provided by Walmart Pharmacy. This would allow customers to obtain assistance from AI chatbots at all times regarding any health concerns or prescription management. Patients will also be able to virtually connect with a healthcare professional instead of having to actually visit the pharmacy. By integrating this service, Walmart Pharmacy will have increased customer satisfaction and will also be keeping up with its competitors.

Objective #2: Provide full disclosure on data storage and usage processes.

Ensuring privacy and protection of patient data is very important. To gain trust, customers should be informed of how their data is being used by AI and how it is stored. AI services such as telemedicine are able to make predictions on how certain drugs might affect someone or on how they should treat a wound. However, to do this, AI needs to have access to a patient's medical history and a record of medicine they are currently taking. To ensure patient trust, Walmart Pharmacy must be transparent about how AI makes decisions.

Objective #3: Implement AI technology that can efficiently take over monotonous tasks.

At Walmart Pharmacy, there are many tedious, time-consuming tasks. This includes counting, verifying, packaging prescriptions, and ensuring that medications do not interfere with one another. If these tasks were taken over by AI, employees would be given more time to deal with patients and provide care for them. This would also enable them to have time to manage new telemedicine services.

Objective #4: Incrementally incorporate AI services into Walmart Pharmacy.

To maximize benefits, artificial intelligence should be utilized incrementally over a period of time. By doing so, employees will have a full understanding of how to use each aspect of an AI tool. This will ensure that there is a minimal occurrence of any problems due to the transition of AI usage.

B. PROPOSED ACTIVITIES AND TIMELINES

After identifying areas of improvement and key objectives for Walmart Pharmacy, the CARE campaign was designed. The goal of this campaign is to increase customer satisfaction and

efficiency in the pharmacy involving AI tools. CARE was chosen as the acronym because we know that Walmart Pharmacy aims to provide efficient care for its patients.

Communication

The first component of the CARE campaign, *Communication*, will focus on utilizing AI for customers to virtually access pharmaceutical services. We will implement telemedicine services to create a virtual care program called Walmart TeleCare. It would include services such as predictive analytics, online consultations, an AI chatbot, and a system that can develop treatment plans with customers.

After employees have been trained, someone will be assigned to make sure AI is running properly and is actively watching for feedback. Once everything is checked and ready, Walmart Pharmacy will need to introduce Walmart TeleCare to customers. This can happen through social media posts and advertisements online as shown in Figure 5.1. To introduce this system to pre-existing customers, a direct message should be sent to them via text or email. Employees can also alert patients of this new telemedicine program during in-person meetings. For more information, customers can be given a flier on virtual care at Walmart Pharmacy.

Figure 5.1 Introduction to Walmart TeleCare

AI systems will be very useful in providing awareness of Walmart TeleCare. DALL-E 3 which can quickly create detailed images, can aid in creating social media posts, advertisements, and other graphics. To create flyers and information sheets, ChatGPT will be used to organize given information so that it is aesthetically pleasing and easy to read. We will also be using ChatGPT to curate personalized emails and messages concerning immunization and clinical service recommendations for customers based on their needs as well as vaccination and medication history.

Authentic

This part of the strategic plan will ensure customers that Walmart Pharmacy plans to use their medical data in an ethical manner to provide patients with a more accurate and personalized experience. Customers will have

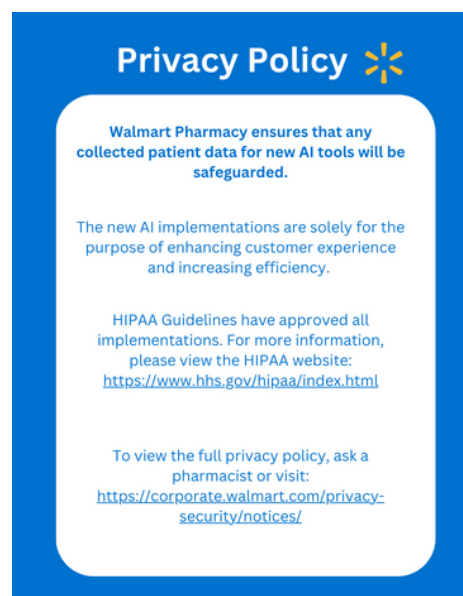

Figure 5.2 Sample Privacy Policy

access to Walmart Pharmacy's privacy policy and will be informed of the Health Insurance Portability and Accountability Act (HIPAA) that prevents healthcare facilities from unethical practices. The privacy policy will be a statement ensuring that patient data will not be shared or sold to any third parties and that the new AI systems will operate under HIPAA guidelines (Figure 5.2). This statement will instill more trust in customers as well as demonstrate Walmart Pharmacy's authenticity.

In addition, customers will be given the option to receive AI benefits through sharing their medical data with AI services provided by Walmart TeleCare. This includes personalized treatment plans, AI driven assistance through chatbots, and predictive analytics based on medical history. Those who choose to opt-out will not receive any additional AI benefits and will only have access to services such as consultations with healthcare professionals. To educate customers on AI usage, Walmart Pharmacy will provide an informational video highlighting the new features of the campaign as shown in Figure 5.3.

Resourceful

This component of the CARE campaign is to develop a plan for Walmart Pharmacy to utilize its employees in the most resourceful manner with help from AI services. To accomplish this, AI can take over monotonous tasks allowing employees to efficiently manage other tasks and services.

Currently, there are a handful of mindless tasks at Walmart Pharmacy that can be simplified by AI usage. To improve the efficiency of pill counting, an AI-based automated dispensing system will be installed. This is an artificial intelligence-powered machine that can automatically dispense, package, and label medications. Although this system is very efficient and accurate, it cannot be completely relied on. Therefore, there will always be a pharmacist making sure the correct medication is being packaged and the dosage is proper. Additionally, we can use an AI service called Deputy to create employee schedules. Deputy curates a staffing schedule by predicting peak demand times according to previous data trends, employee availability, and can provide real-time alerts on shift changes. These AI-powered services will lead to increased efficiency at Walmart Pharmacy, reducing wait times at the pharmacy which will greatly increase customer satisfaction.

Establish

To properly utilize AI, the final component of the campaign will focus on establishing an integration rate to maximize effectiveness. As mentioned throughout the business panel, to successfully implement artificial intelligence, companies need to integrate it in increments. They should focus on understanding and including one component at a time instead of

incorporating it all at once. This will allow employees and managers to get a detailed understanding of each aspect before incorporating a new part.

Walmart Pharmacy will also need to train its employees to use the new artificial intelligence tools. The employees will need to be trained on how to manage patient needs online and use AI systems. This paid training program will last three to four weeks and will be conducted by the pharmacy manager, along with additional professionals who can educate employees on AI usage, safety, and virtual customer service.

To effectively integrate AI, we have determined the method for incorporating each part of our campaign simultaneously with one another. We will begin by integrating Deputy for employee scheduling. While this system is being integrated, planning for Walmart TeleCare will begin by working with the pharmacy manager to determine the services and any new hires. After the scheduling system has been integrated, we will implement the automated dispensing system. To ensure artificial intelligence implementation is utilized properly, there will be one to two weeks in between each aspect of the different AI services. This will allow us to fully understand each AI tool component and minimize complications.

Timeline of Proposed Activities from April 2025 to August 2025

	April	May	June	July	August
C	- Work with manager to determine virtual services - Find AI programs that can be used	- Begin creating Walmart TeleCare services - Hire website designer	- Train Employees on using Walmart TeleCare - Finalize website	- Launch Walmart TeleCare - Advertise	- Monitor website and services - Analyze feedback and make changes as needed
A	- Ensure all implementations are approved by HIPAA and Washington State Law	- Create authenticity statement and privacy policy for Walmart TeleCare	- Upload policy to Walmart Pharmacy website - Create information page for Walmart TeleCare and AI usage	- Inform patients of updated privacy policy and AI usage	- Upload privacy policy to Walmart TeleCare - Monitor patient trends and feedback
R	- Acknowledge tasks that can be taken over by AI - Determine what AI services will be used	- Integrate Deputy for employee scheduling - Purchase automated dispensing machine	- Train employees to use automated dispensing system - Monitor Deputy and analyze feedback from employees	- Test and integrate automated dispensing system	- Monitor changes and feedback - Make adjustments as needed

E	- Begin implementing AI once HIPAA approval is administered - Create plan for implementing each AI service	- Make sure AI employee scheduling system is fully utilized and working	- Plan for future services - Train Employees	- Slowly incorporate additional services for each plan	- Monitor effectiveness of each service - Determine future utilities
----------	---	---	---	--	---

C. PROPOSED METRICS OR KEY PERFORMANCE INDICATORS TO MEASURE PLAN EFFECTIVENESS

To measure the success of the CARE campaign, key performance indicators (KPIs) will be used. These measurements will be determined by specific quantitative and qualitative factors.

	Purpose	Metrics	Goal
C	- Provide customers with virtual healthcare	- Number of Customers using Walmart TeleCare - Phone calls made to Walmart Pharmacy	- 70% of Walmart Pharmacy patients are using Walmart TeleCare - 50% decrease in phone calls
A	- Increase trust between customers and Walmart Pharmacy	- Number of customers accepting the privacy policy and opting in for AI benefits	- 90% of patients using Walmart TeleCare will opt-in for AI benefits
R	- Increase efficiency - Reduce tedious tasks to better utilize employees	- Number of clinical services provided by pharmacists - Number of filled prescriptions	- 20% increase of clinical service availability - 20% increase of prescription availability - Reduce wait times by 20% within the first three months
E	- Ensure smooth transition of AI tools	- Monitor problems and changes needed	- Reduce negative feedback by 50%

VI. PROPOSED BUDGET

Walmart Pharmacy's budget for the CARE campaign was created by researching costs for each aspect of our plan. With this information, we have created a reasonable budget that will focus on enhancing the necessary objectives of our campaign.

Communication: Our total budget for the “Communication” aspect of the campaign will be \$21,000. This includes the cost of a website designer to create Walmart TeleCare and the cost of a chatbot.

Authentic: The budget for this part of the campaign will only cover the cost of Canva Pro. Canva will be utilized to design the privacy policy and other key messages regarding artificial intelligence usage. The total budget for this will be \$180.

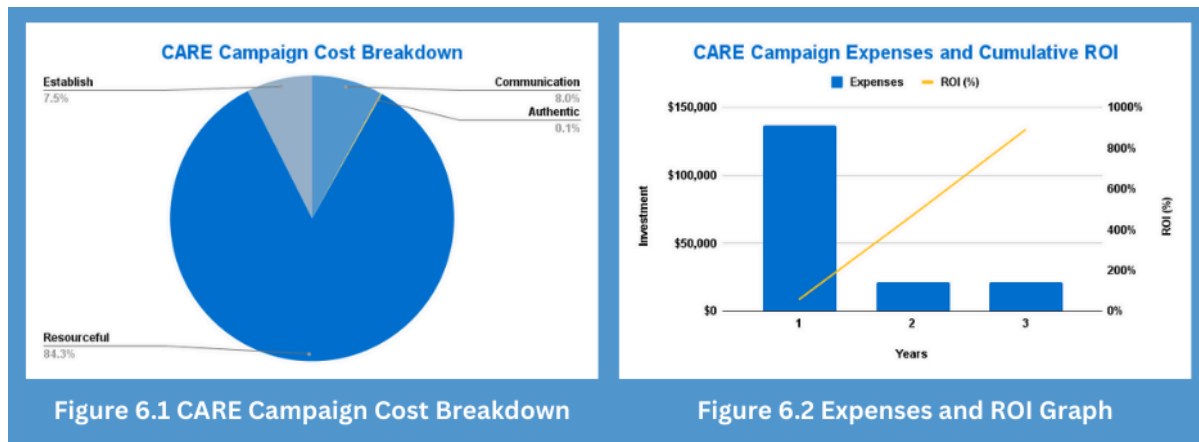

Resourceful: This aspect of the campaign incurs the highest costs, as it involves the implementation of advanced AI tools. The budget for integrating the automated dispensing system and predictive analytics is \$115,360.

Establish: Our final budget for this portion of the plan will be \$10,240. This includes the cost of paid employee training and ChatGPT Plus which will be used to curate personalized emails for customers regarding changes at Walmart Pharmacy related to the CARE campaign.

	Item	One Time Expense	Recurring Cost	Number of Times (yearly)	Total
Communication	Website Designer	\$5,000			\$5,000
	Chatbot		\$6,000	1	\$6,000
Authentic	Canva Pro		\$15	12	\$180
Resourceful	Automated Dispensing System	\$100,000			\$100,000
	Deputy		\$30	12	\$360
	Predictive analytics		\$15,000	1	\$15,000
Establish	ChatGPT Plus		\$20	12	\$240
	Training	\$10,000			\$10,000
Total Expense (1st year) :					\$136,780
Recurring Cost after 1st Year:					\$21,780

Return on Investment

Through the increased availability of clinical services and filled prescriptions, the predicted ROI will be 58%. This was determined by calculating the profit earned from 400 additional vaccinations and a 20% increase in prescriptions for the first year. An average of \$40 for each vaccination multiplied by 400 additional vaccinations equals \$16,000. The pharmacy makes approximately \$1 million in profit yearly due to prescriptions. The 20% increase in prescriptions will yield an additional \$200,000. The total profit for the first year will be around \$216,000.

Communication: The new Walmart TeleCare program will enable customers to connect with Walmart Pharmacy virtually. This will **enhance customer satisfaction and encourage word-of-mouth recommendations to attract new customers.**

Authentic: The privacy policy, emphasizing data protection and AI, will build trust between customers and Walmart pharmacy. This will likely **enhance customer loyalty and strengthen Walmart Pharmacy's credibility ensuring customers feel valued.**

Resourceful: The implementation of AI tools to handle tedious tasks will allow employees to focus more on clinical services. As a result, the increased availability of vaccinations will **allow Walmart Pharmacy to offer more clinical care, leading to increased revenue through additional immunizations.**

Establish: Having a method for reviewing and analyzing our plan is important for enhancing our AI experience. Additionally, this plan will also involve sending personalized messages to customers concerning changes or issues. This will **reinforce the bond between the pharmacy and patients while reducing errors.**
